

**City of West Hollywood
Development Planning Program
NPDES Annual Report
FY 2011/12
(IV.C.1) (Page 21)**

Priority Projects are reviewed by the City's NPDES consultant, John L. Hunter Associates. This review process includes implementation of post construction BMPs that are in compliance with the NPDES permit.

Additional Efforts:

- Maximize the percentage of permeable surfaces and minimize the quantity of storm water directed to impermeable surfaces and the MS4.
- Minimize pollution emanating from parking surfaces through the use of appropriate treatment control BMPs and good housekeeping practices.
- Post-construction BMPs appropriate to restaurants and other sites meeting priority project development and redevelopment criteria.
- In all instances, applicants must provide for appropriate permanent measures to eliminate storm water pollutant loads from construction sites. Sites are inspected routinely by the City's Public Works Inspector.
- Annual post-construction structural BMP inspections are conducted by the City's NPDES environmental consultant, John L. Hunter & Associates. Citations are sent to all inspected properties that are not in compliance.
